

This measure shows the proportion of eligible cancer patients who received their first treatment within 31 days of a health professional’s decision to treat.

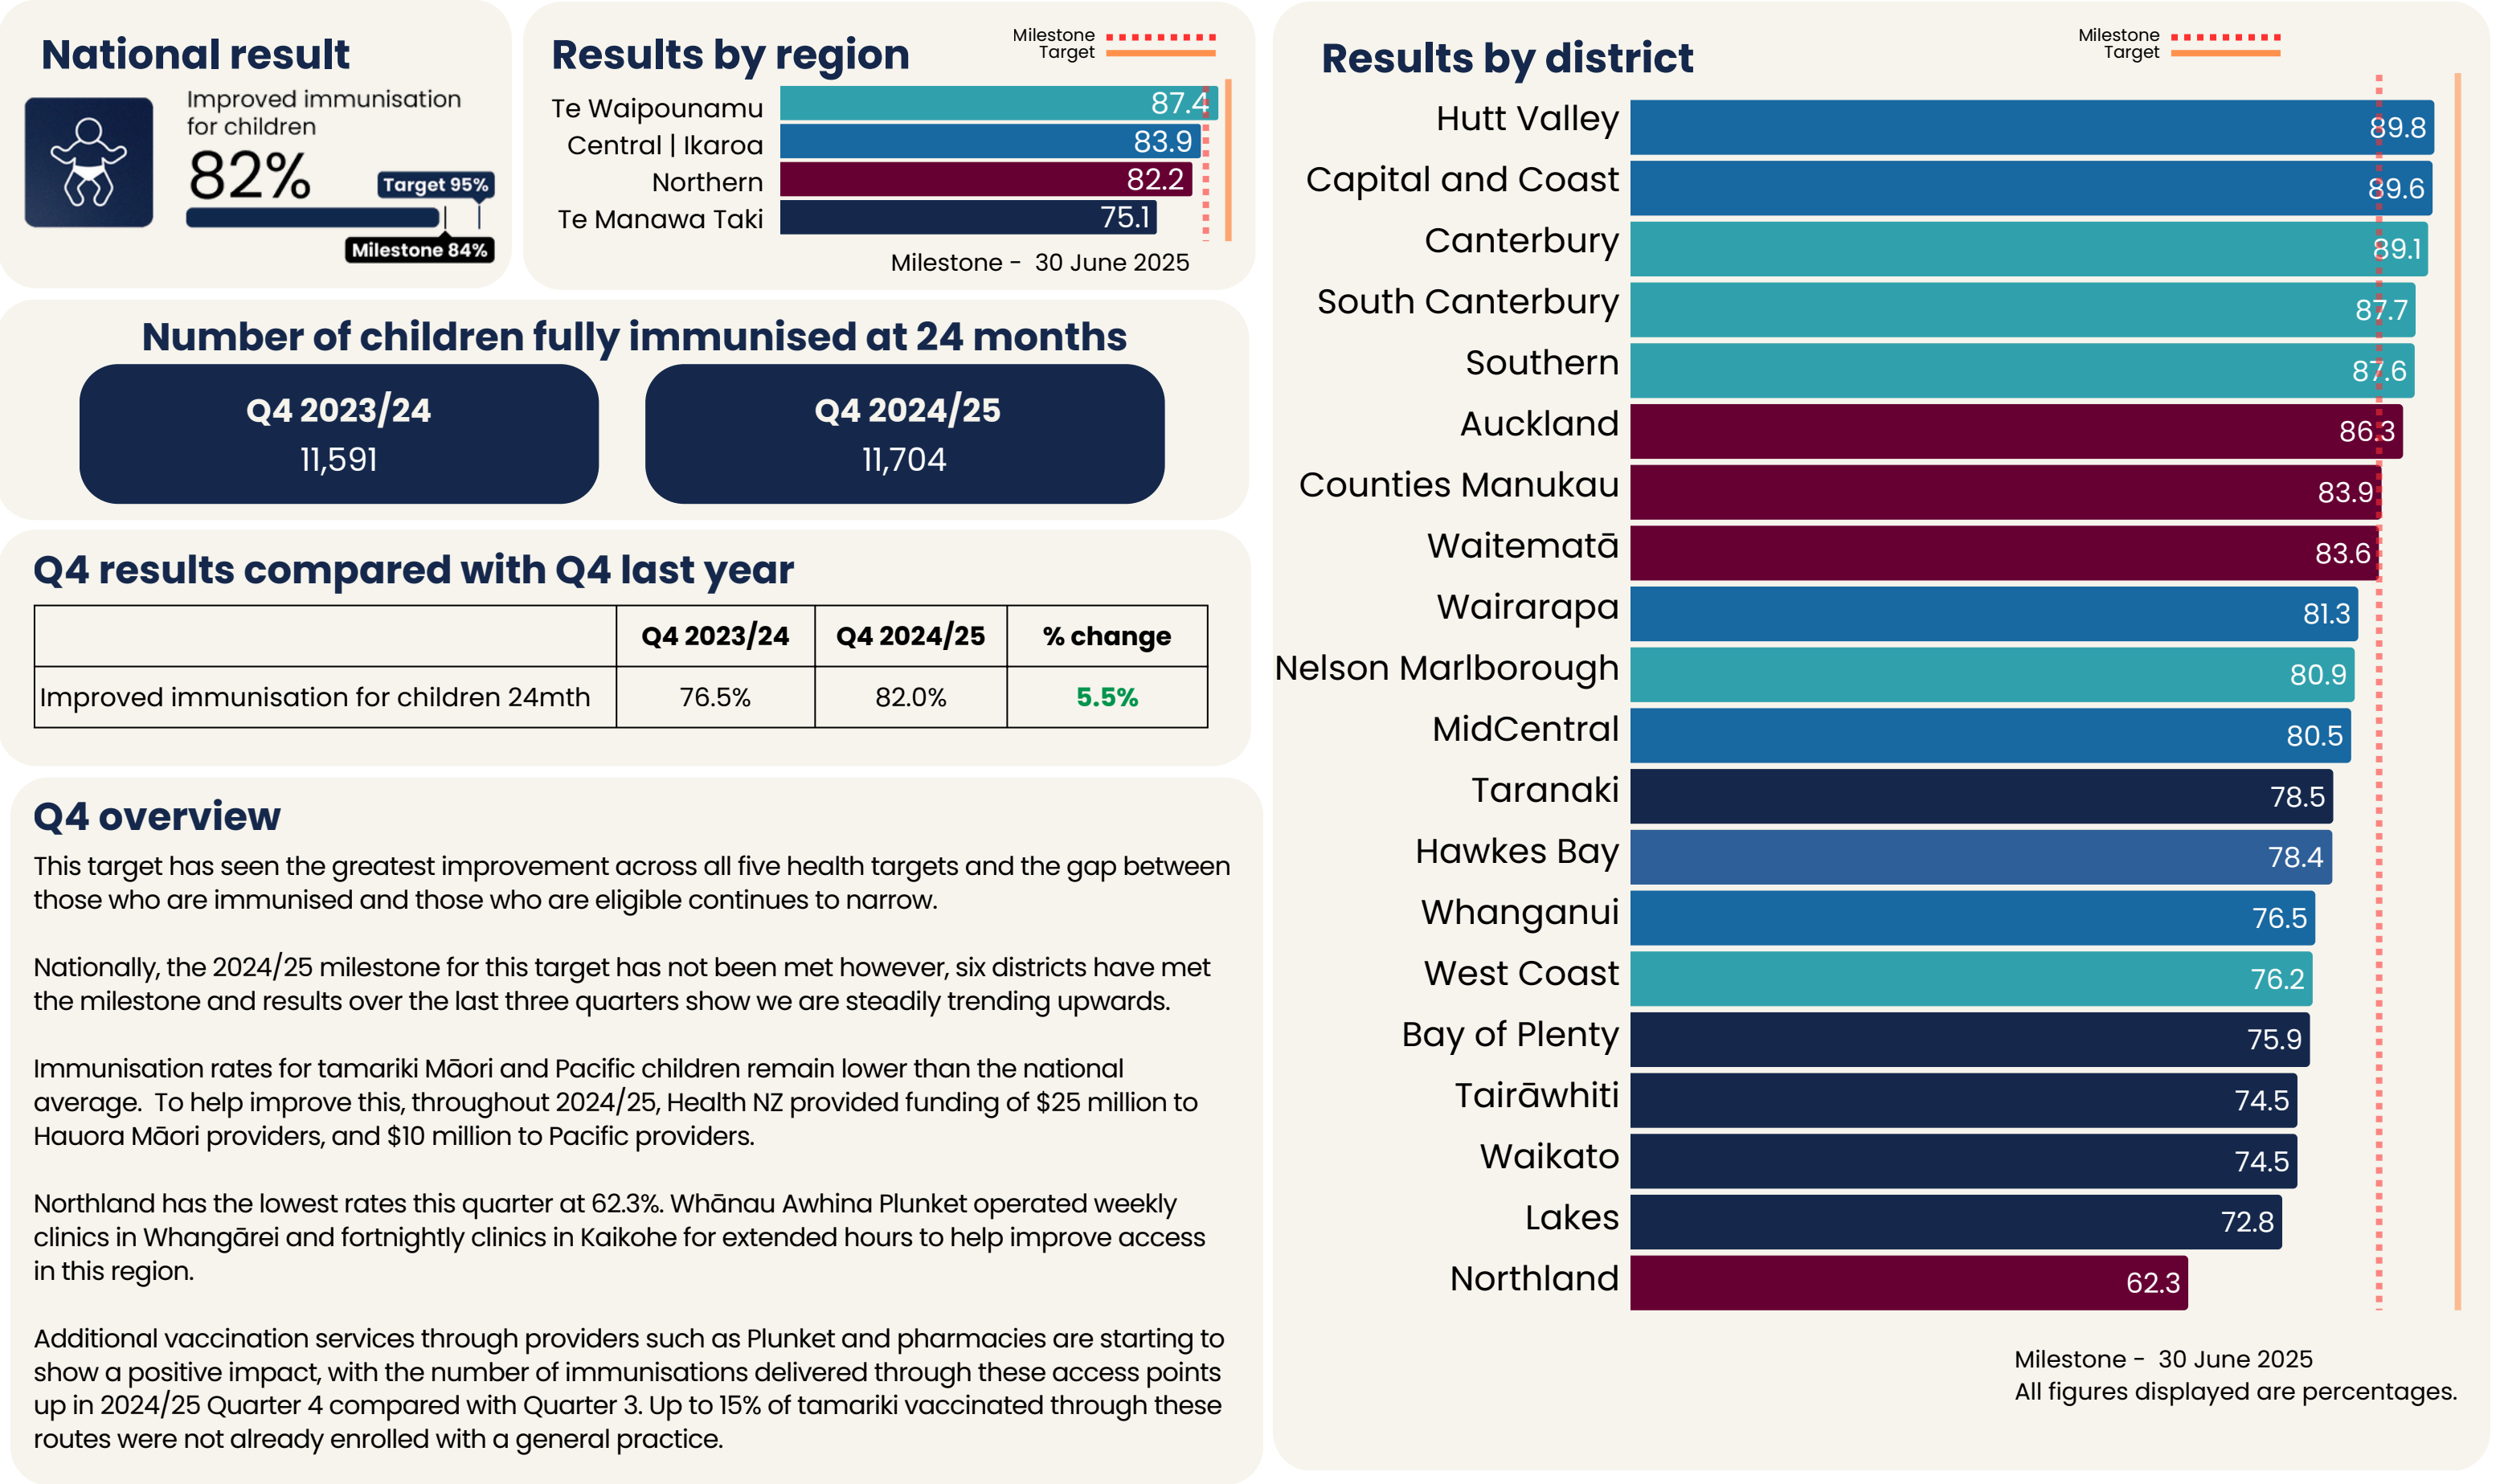

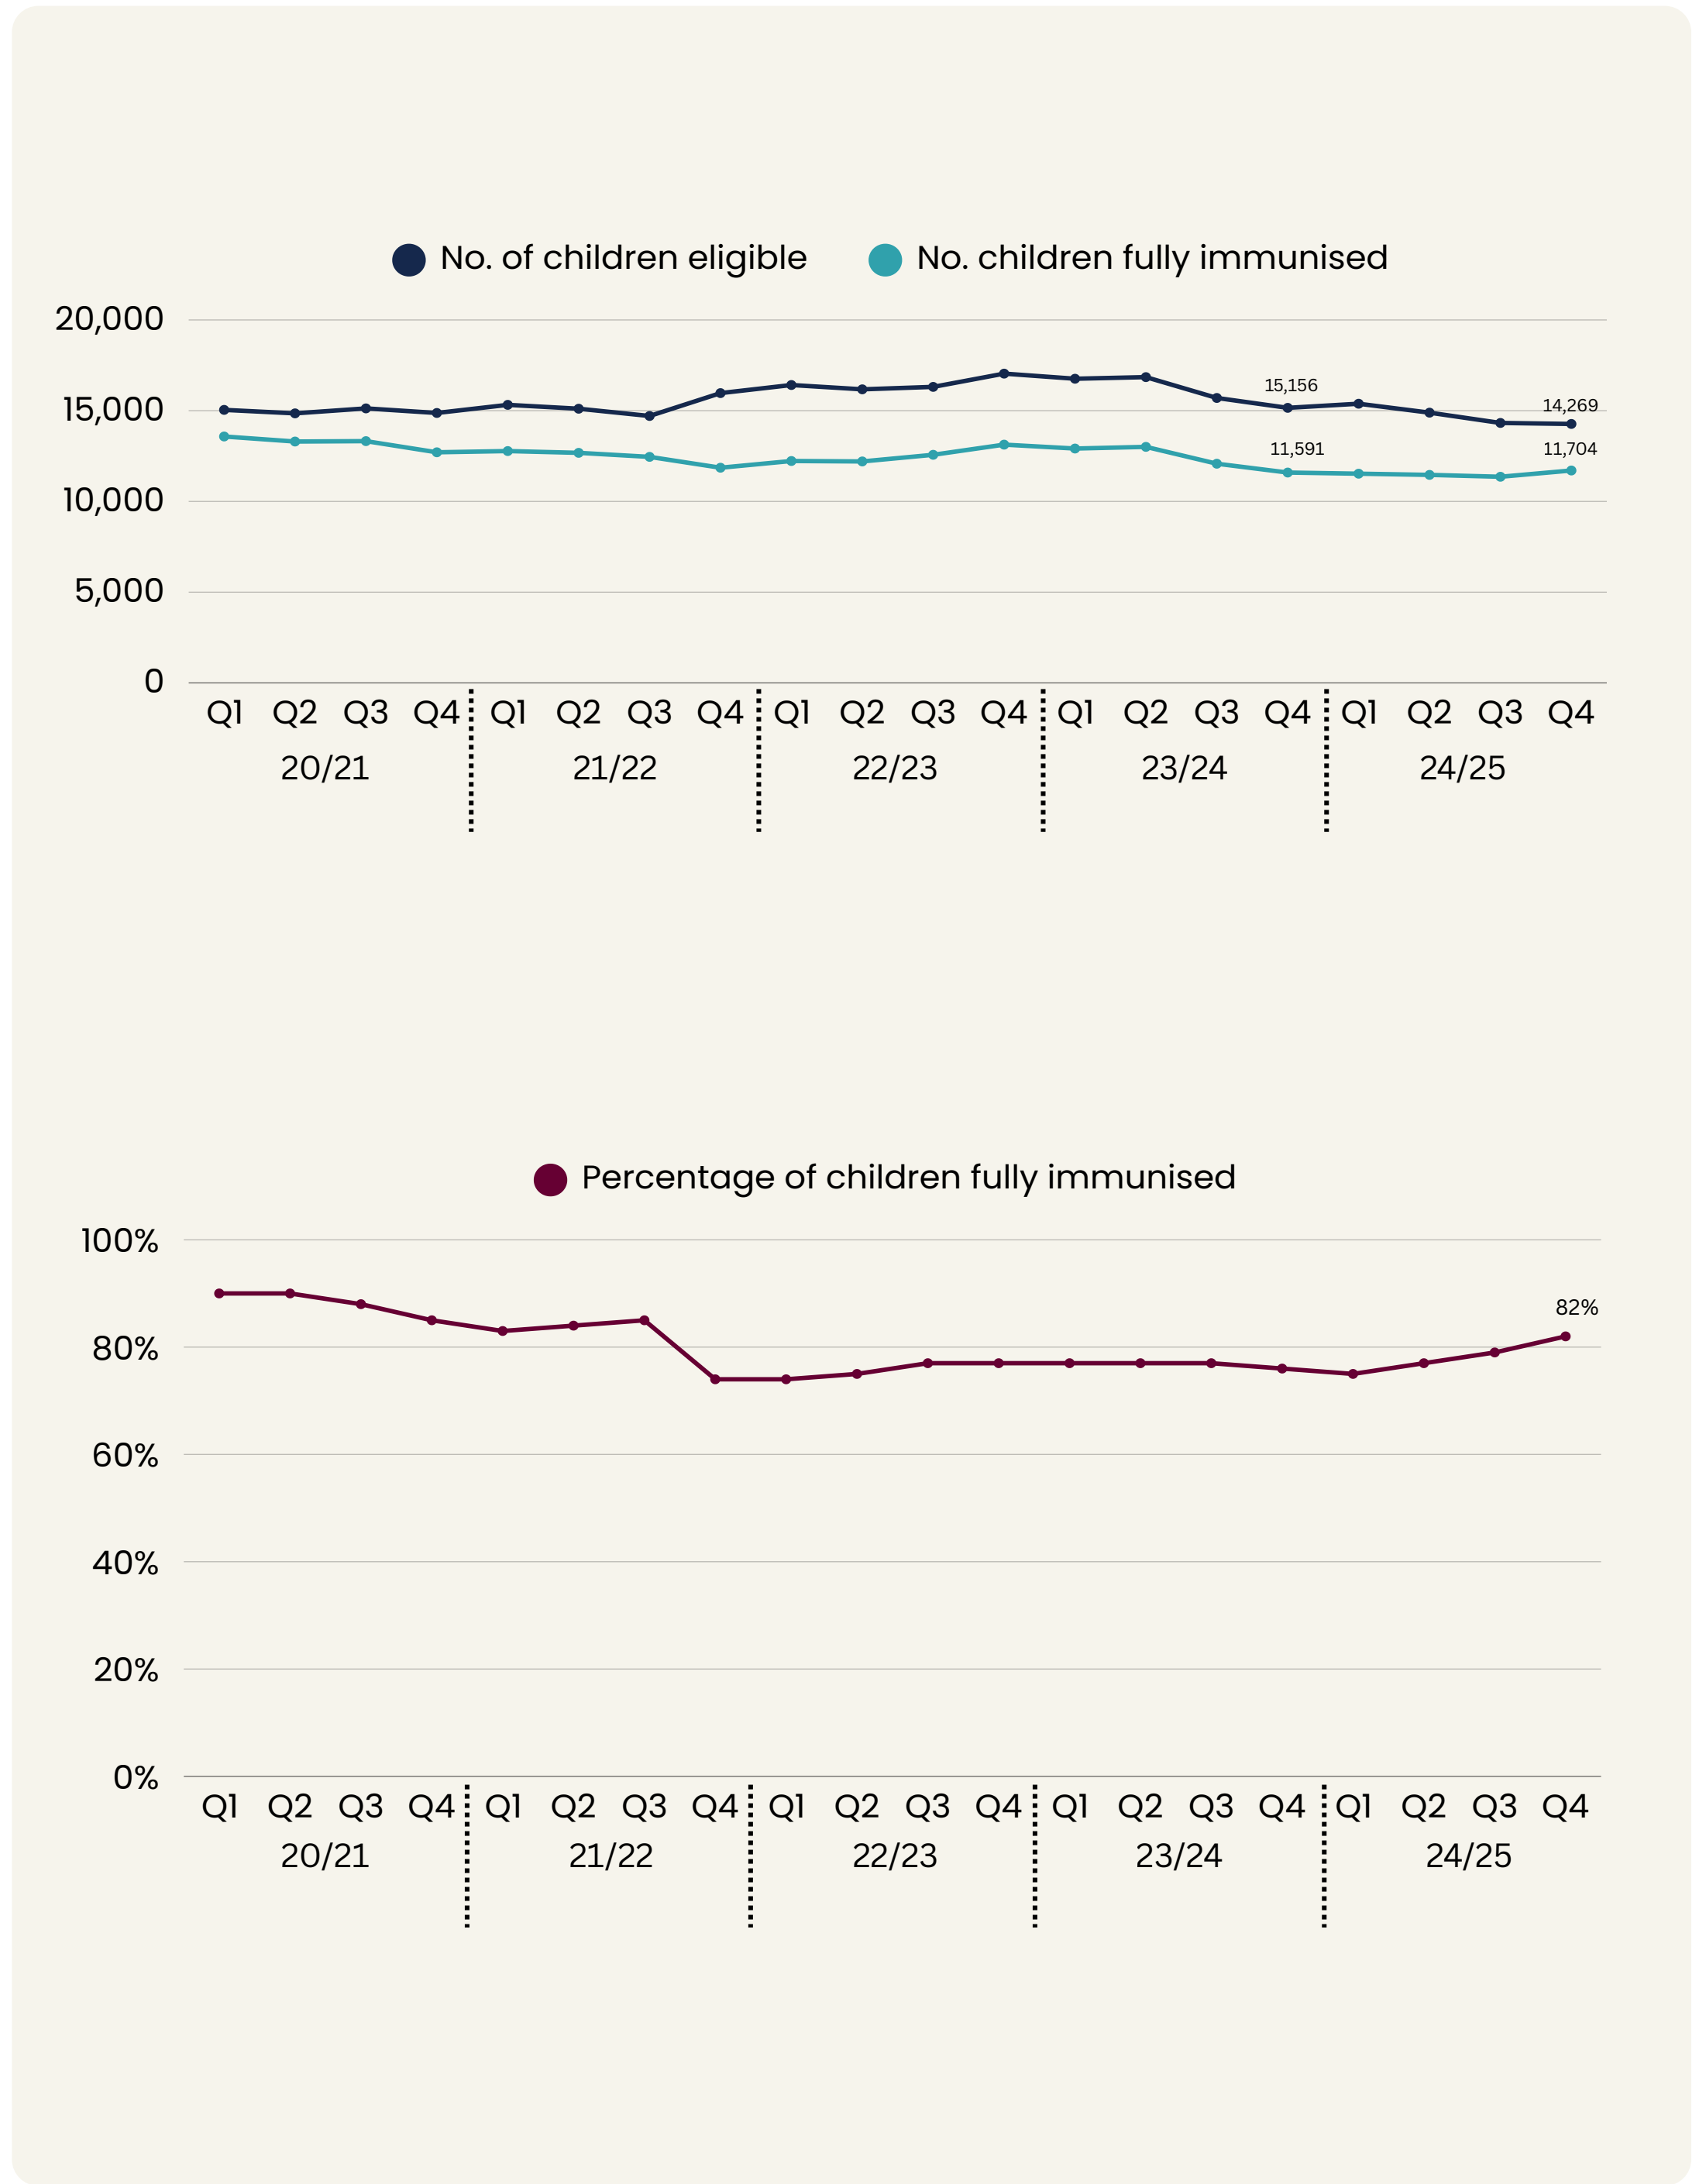

Data is based on point-in-time snapshots and may differ from other published statistics due to differences in timing, methodology, or data sources. [See caveats.](#)

The total volume of patients receiving first cancer treatment has remained relatively stable over the past five years. Performance in the health target has also remained stable. We expect that work underway as part of the cancer service delivery and transformation programme along with recent investment in additional medicines will help ensure more people receive timely access to cancer treatment through Regional Cancer Service Delivery Networks.

This measure shows the percentage of children who have all their scheduled vaccinations by the time they are two years old.

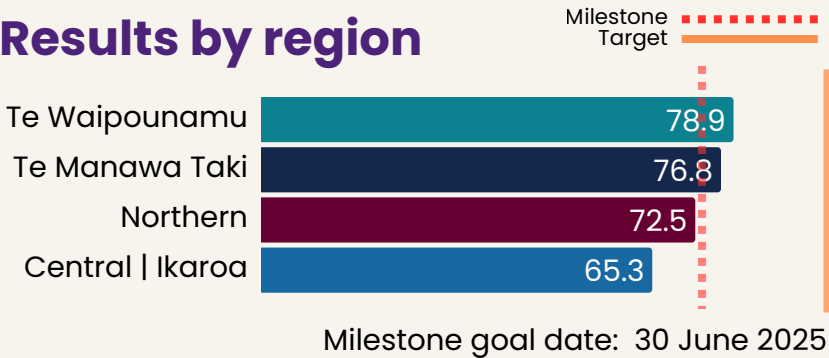

Data is based on point-in-time snapshots and may differ from other published statistics due to differences in timing, methodology, or data sources. [See caveats.](#)

This measure reports patients admitted, discharged or transferred from an ED within six hours as a percentage of all patients who attended ED.

Shorter stays in ED <6hrs	71.2%	73.9%	2.7%

Q4 overview

Twelve districts met the milestone this quarter and West Coast met the 95% target.

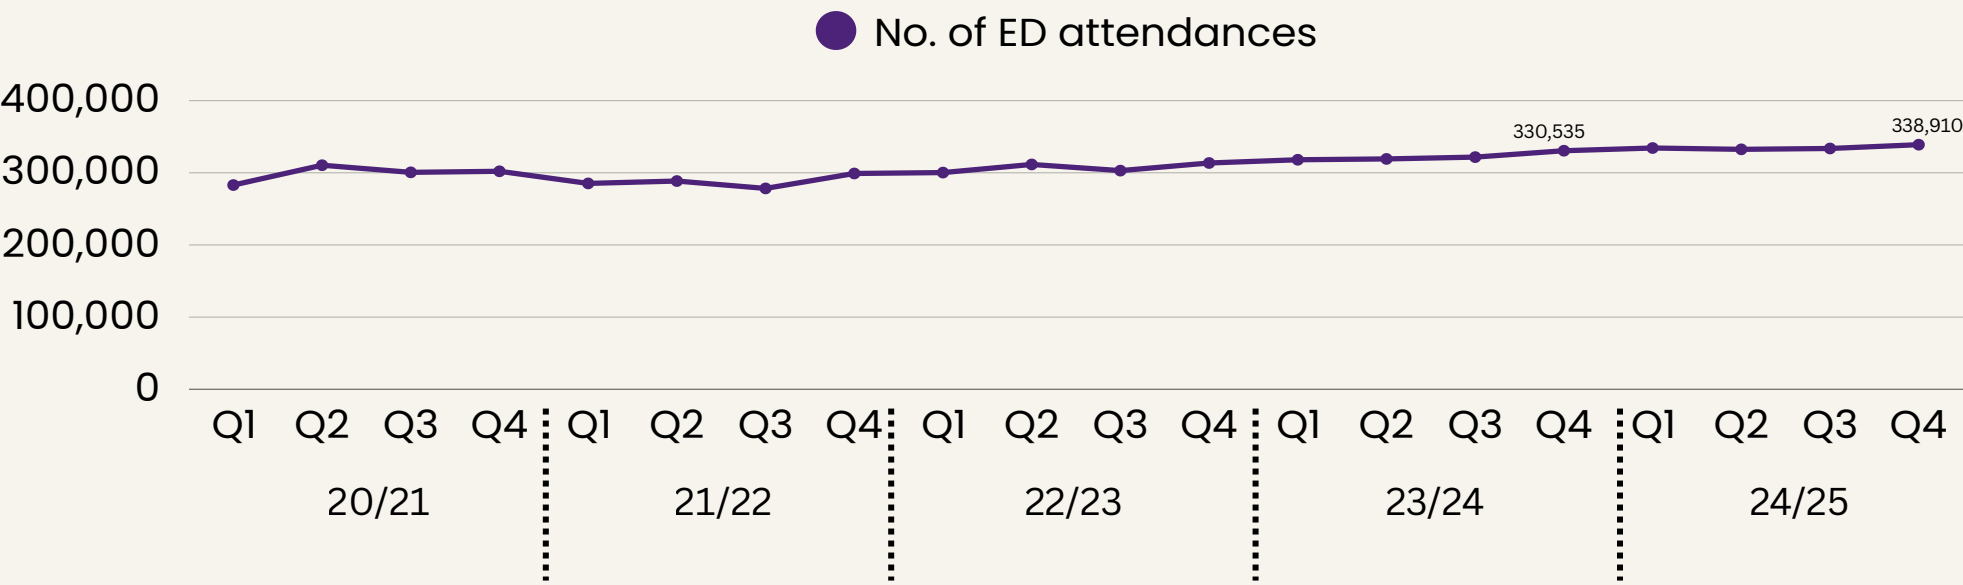

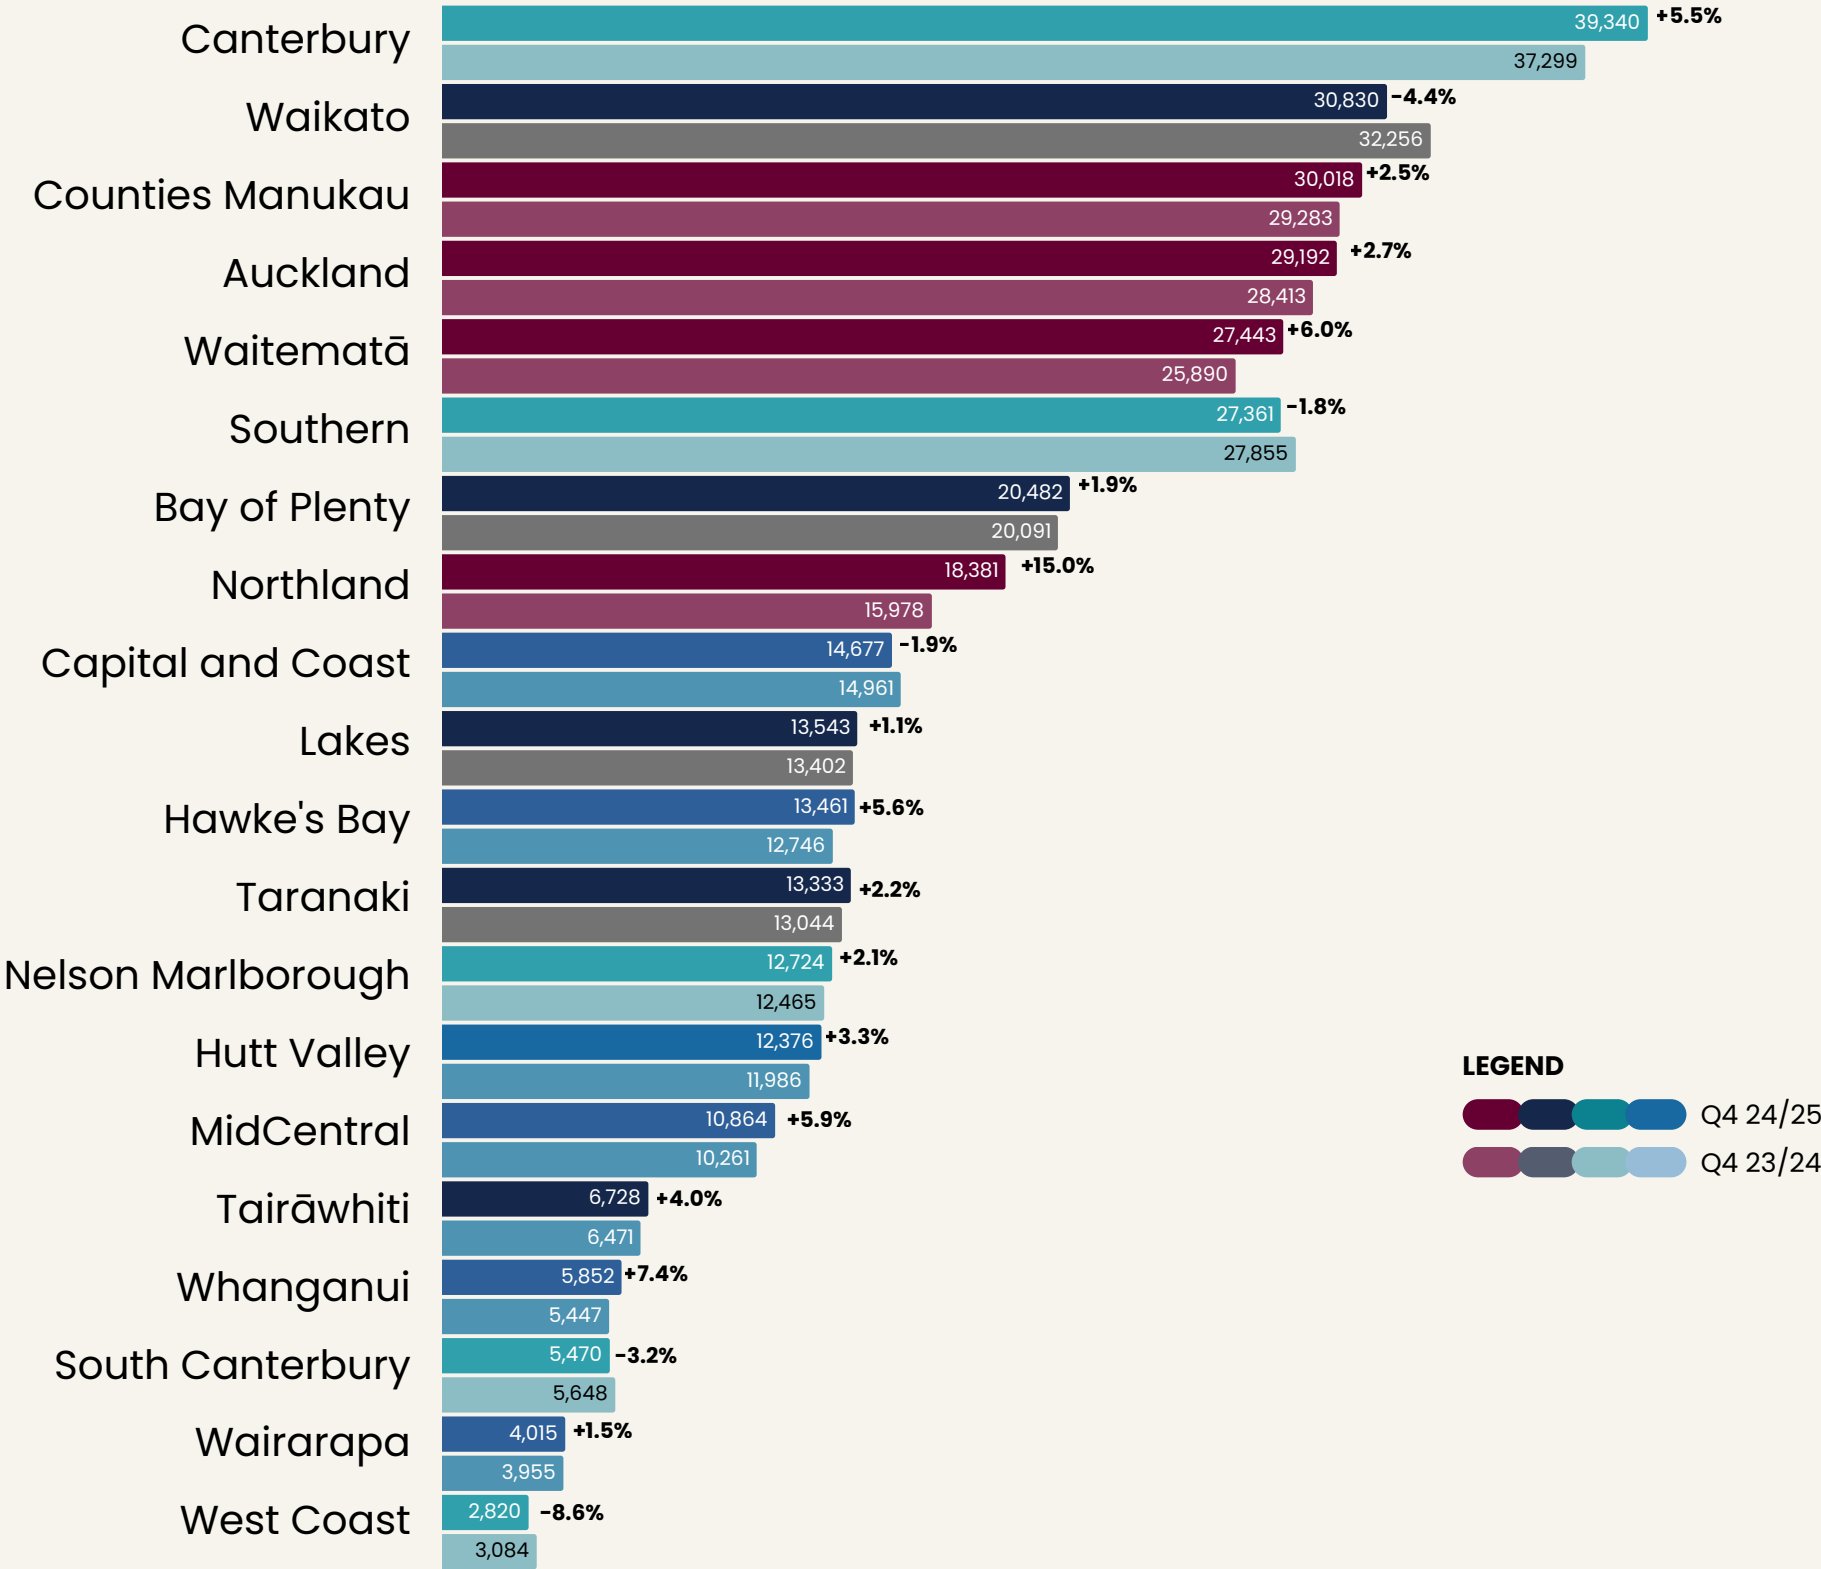

Emergency department presentations are increasing over time. The number of presentations this quarter were higher than Q3 2024/25 and Q4 2023/24. Despite this demand, the number of people treated within six hours was the highest it's been in five years.

A number of initiatives are underway to help drive results in this target including:

- A live performance dashboard was launched at Wellington ED, allowing frontline teams to monitor and respond to hotspots.
- 20 dementia level beds opened in Feilding and 37 rest home beds were converted to dual purpose beds in Whanganui. This increase in bed capacity across the Central region supports timely hospital discharges and improves hospital flow.
- In MidCentral, a system flow co-ordinator and use of real-time data alerts has reduced the number of patients waiting more than 24 hours, from a peak of 274 at the start of 2024/25 to just one by the end of quarter four.
- A 24/7 urgent care will open in Counties Manukau by late 2025.
- Auckland City Hospital's refurbished ED opened offering dedicated spaces for triaging.

Milestone – 30 June 2025

Q4 overview

Eleven districts met the milestone this quarter and, overall, people are waiting less than four months to access first specialist assessments. The total wait list peaked in March but has now reduced to lower than this time last year.

Patients waiting more than four months are actively monitored each week, and the number of patients coming off the waitlist has been consistently higher than the number of patients coming on.

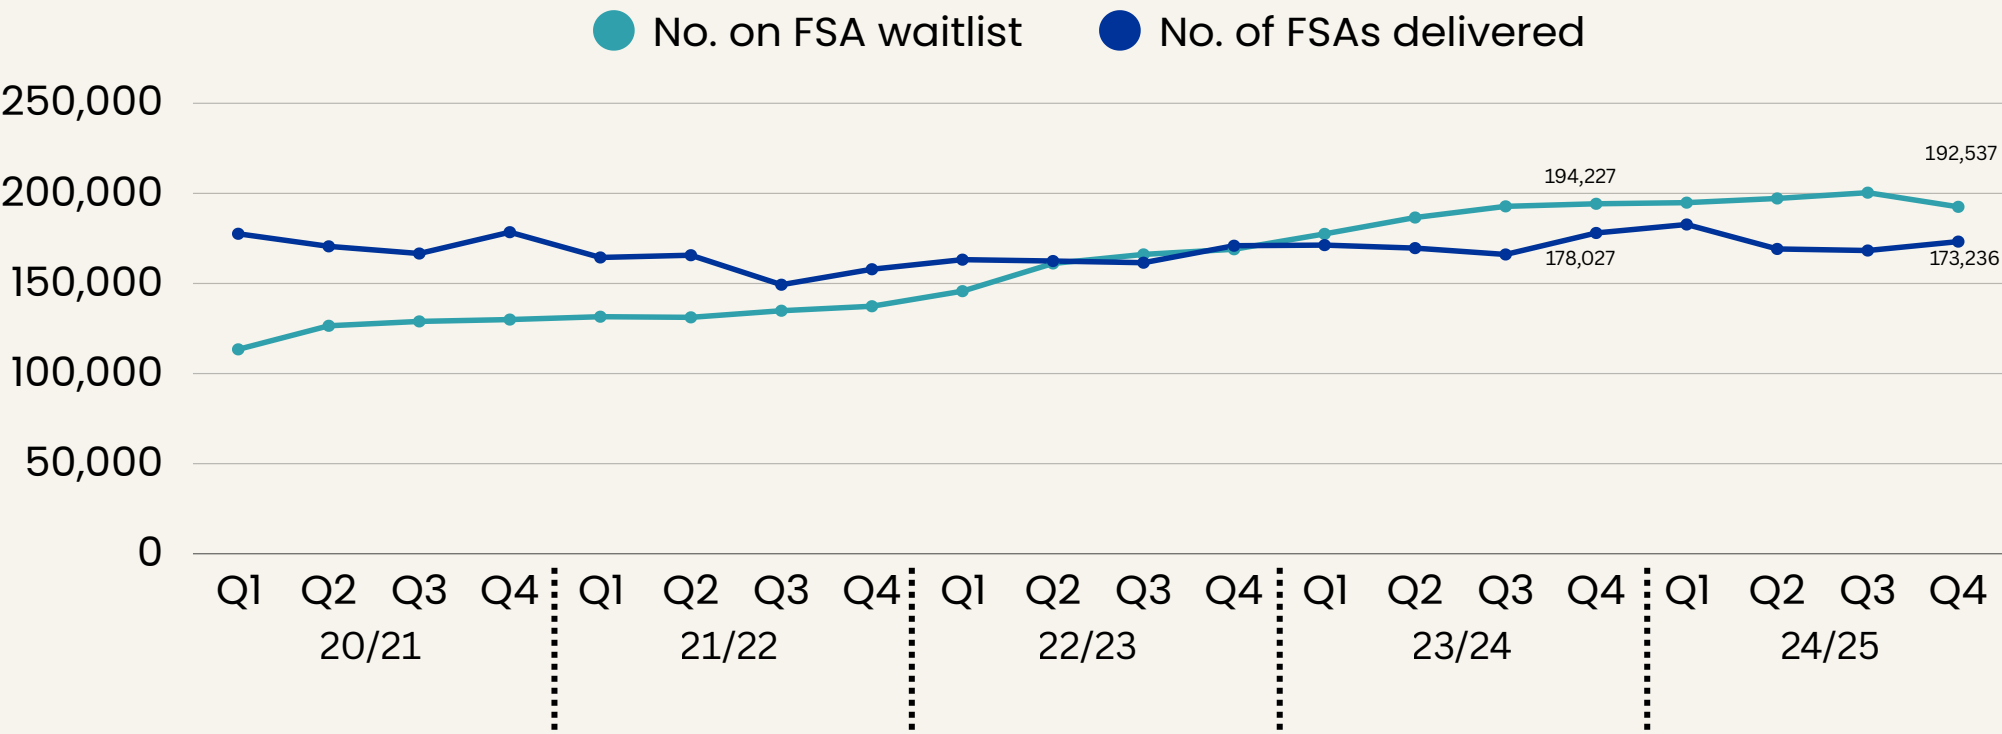

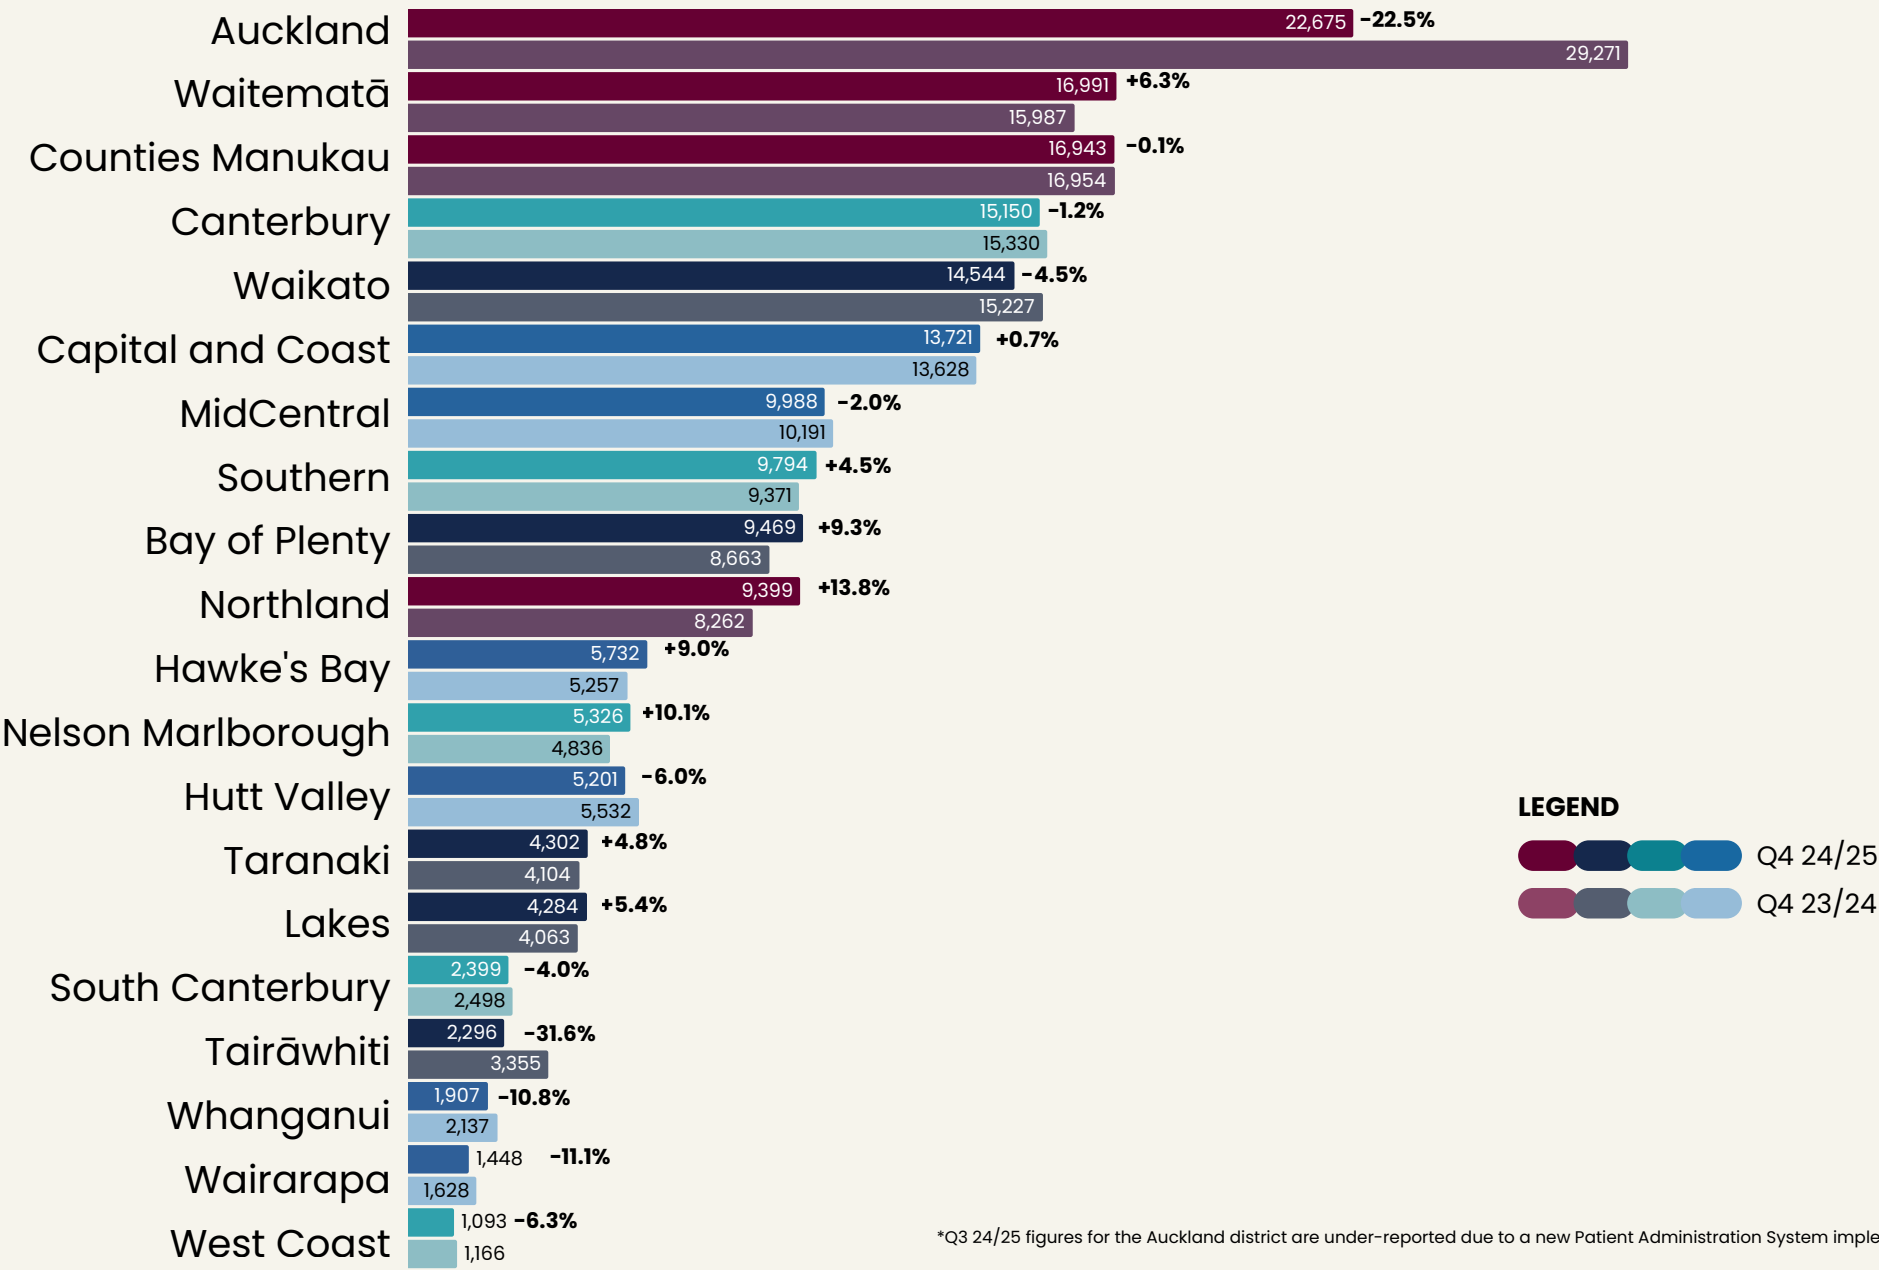

A focus on booking patients by both clinical priority and time waiting has helped to ensure the longest waiting patients are seen first. By the end of quarter four, there were no patients waiting longer than two years that didn't have a plan in place.

Regions and districts are ensuring clinics are fully booked and are operating extended hours for specialties with the longest waitlists.

All patients waiting more than four months have been proactively contacted to provide assurance that they are still on the waitlist, confirm whether they still require the assessment/treatment, and check whether their condition had changed.

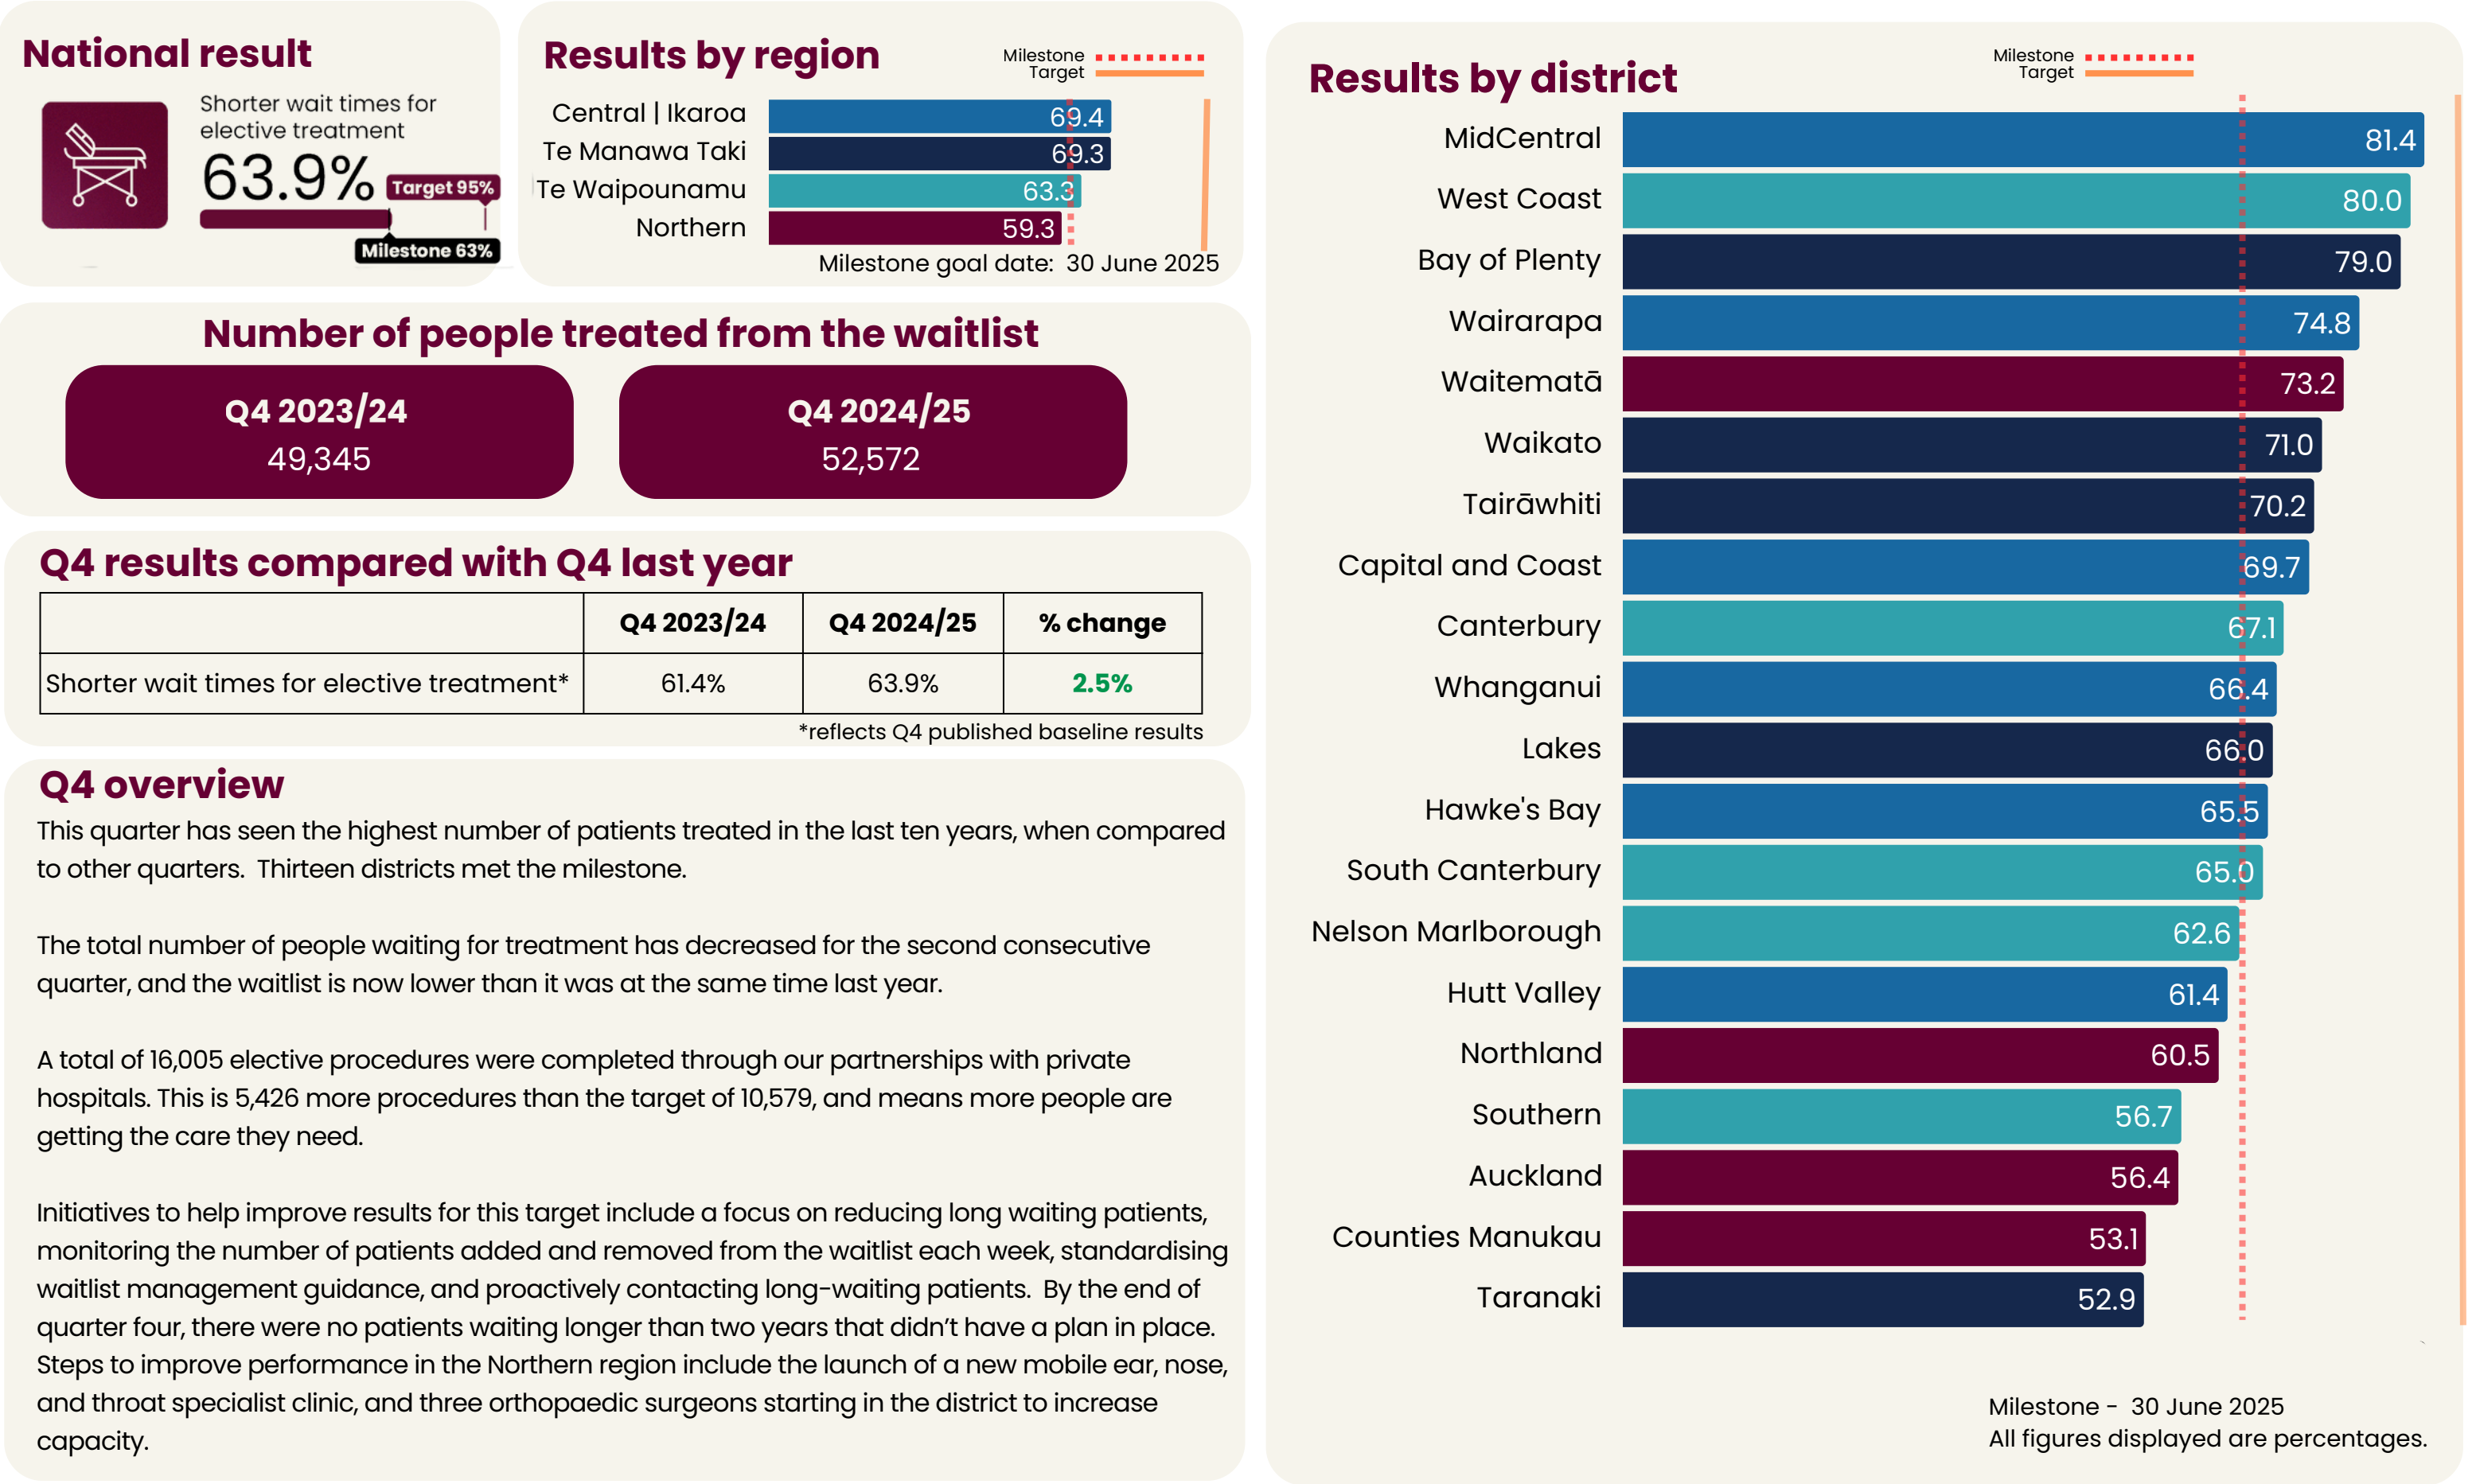

Milestone – 30 June 2025
All figures displayed are percentages.
