Acute stroke services accreditation review:

Facility Name:_____

Date:_____

Review team: Name:

Role:

Number	Description	Recommended evidence	Comment
Themes and	d principles		
1a	Patient and Whanau centred care	Evidence of involvement in service planning and development.	
1b	Respect for culture	Cultural plans, cultural advisors, physical environment	
1c	Equity of outcomes	Specific plans, indicators, audit	
Prehospital	care		
2a	An agreed pre-hospital assessment and screening process is in place with EMS services	St John assessment and screening protocol for stroke	
2b	An agreed and current EMS destination policy is in place and understood by the receiving service	St John destination policy	
2c	Communication processes are in place for advance notification to the receiving services	Policy/description about how ambulance communicates with receiving service	
2d	An agreed pathway exists to guide primary care professionals	Evidence of primary care pathway for stroke (e.g. internet site)	

Number	Description	Recommended evidence	Comment
Acute prese	entation	·	· ·
3a	A responsive acute stroke team or stroke process is in place at the receiving hospital 24/7	Policies, descriptions, rosters, job descriptions	
3b	Notification protocols are in place for stroke team activation (e.g. code stroke)	Protocols	
3c	Rapid access to imaging includes non-contrast CT, CT angiography, CT perfusion imaging	Descriptions	
3d	A rapid assessment pathway is in place to ensure timely access to thrombolysis where indicated	SOP	
Зе	Agreed pathway exists for access to Stroke Clot Retrieval	Protocols	
Thrombolys 4a	is Stroke thrombolysis is available 24 hours every day	Policy, rosters, description	

Number	Description	Recommended evidence	Comment
4b	Thrombolysis should be under the supervision of physicians credentialed in thrombolysis (either on-site or via telestroke)	Policy, credentialing documentation	
Acute strok	e unit care		
5a	A geographically discrete area of co-located beds exists for the management of acute stroke patients	Number of beds. Description, polices, visit	
5b	Care is provided by a multidisciplinary team of health professionals including; stroke physicians, acute stroke nurses, occupational therapy, physiotherapy, speech language therapy, dieticians, cultural and spiritual support teams	Description of resources List of individuals	
5c	Regular team meetings occur at least weekly with evidence of daily communication	Timetables, evidence of meetings	
5d	Assessment and management protocols or processes exist for; neurological monitoring, post thrombolysis monitoring, arrhythmia monitoring, swallow assessment, VTE prophylaxis	Protocols	

Number	Description	Recommended evidence	Comment
5e	Assessment protocols exist for identifying rehabilitation needs with clear pathways to inpatient or community rehabilitation	Policies, evidence of assessment and assessment processes	
5f	Transition of care processes include written care plans, whanau education and training Includes care transitions to home, other hospitals, rehabilitation, or death.	Policies, evidence of transitional care planning	
5g	Protocols/processes exist for secondary prevention and integration into community (includes lifestyle).	Evidence of protocols. Description of processes	
TIA care			I
6a	An agreed TIA management pathway exists to guide primary and secondary care	Evidence of pathway (eg intranet/internet site)	
6b	A process is in place to ensure high risk TIA patients are seen, investigated and managed promptly	Protocols, audits	
6c	Processes are in place that allow lower risk TIA patients to be seen in ambulatory care in acceptable timeframes	Protocols, audits	

Description	Recommended evidence	Comment
vice access		
Agreed criteria are in place for access and transfer to tertiary services including Stroke Clot Retrieval, neurosurgery, vascular surgery	Protocols for transfer for main conditions.	
There is a designated stroke physician lead and designated stroke nurse lead	Names and time allocated	
A regular education programme exists for all members of the stroke team	Evidence of education programmes and attendance	
A credentialing process is in place for physicians supervising/providing thrombolysis	As for 4b	
v improvement		
Consumer feedback	Consumer experience survey programmes and results, consumer reported outcome measures	
The service participates in the national registry for stroke thrombolysis	Register results	
Regular review of Ministry indicators occurs with evidence of quality improvement activities	Ministry data and quality improvement activity evidence	
	vice access Agreed criteria are in place for access and transfer to tertiary services including Stroke Clot Retrieval, neurosurgery, vascular surgery There is a designated stroke physician lead and designated stroke nurse lead A regular education programme exists for all members of the stroke team A credentialing process is in place for physicians supervising/providing thrombolysis y improvement Consumer feedback The service participates in the national registry for stroke thrombolysis Regular review of Ministry indicators occurs with evidence of	vice access Agreed criteria are in place for access and transfer to tertiary services including Stroke Clot Retrieval, neurosurgery, vascular surgery Protocols for transfer for main conditions. There is a designated stroke physician lead and designated stroke nurse lead Names and time allocated A regular education programme exists for all members of the stroke team Evidence of education programme or programmes and attendance A credentialing process is in place for physicians supervising/providing thrombolysis As for 4b The service participates in the national registry for stroke thrombolysis Consumer reported outcome measures The service participates in the national registry for stroke thrombolysis Ministry data and quality improvement activity

Number	Description	Recommended evidence	Comment
9d	Regular review of thrombolysis cases occurs	Minutes of meetings, meeting timetables	
9e	Stroke service staff are aware of, and participate in QI and monitoring activities	Discussion with teams, Quality programme reports	
Organisatio	nal management and development	L	
10a	Stroke clinical leadership works closely with service management	Organisational structure, evidence of meetings	
10b	Consumers have input into service direction and development	Service structure, minutes of meetings, planning sessions, feedback	
10c	Stroke team has opportunity to participate in service development	Service structure, minutes of meetings, planning sessions, feedback	
10d	DHB processes include stroke care development	Service structure, minutes of meetings, planning sessions, feedback	

Number	Description	Recommended evidence	Comment		
Structural s	Structural support services				
11a	On-site services:Designated acute stroke unitOn-site 24 hour CT accessNon-contrast CT headCT AngiographyCT Perfusion scanningCarotid imaging duringbusiness hours (Ultrasound orCTA)MRI/MRA during businesshoursCardiac monitoring capabilityfor at least 72 hoursAccess to HDU/ICU24 hour laboratoryCardiac investigations(transthoracic echo, transoesophageal echo, Holter andevent monitoring, etc)	Organisational structure, discussion with other services, walkaround			
11b	Services by referral: Vascular surgery Neurosurgery (hemicraniectomy, etc) Neurointerventional radiology (clot retrieval, etc)	Evidence of referral pathways and criteria
