

# Digital Subscriber Onboarding- High-level process

»»» Access to Digital Asset's Mock+ or UAT Environments for the «««

## Pre-Registration

[Important documents to read before you register your organisation](#)

[APIs currently available on Digital Services Hub](#)

## Register Your Organisation

[Register your organisation to the Developer Portal](#)

When registering, please ensure that your Full Name, Middle Name, and Last Name exactly match what appears on the identity document you'll be using in the next step.

## User Sign-up

Receive email invitation to sign up on Developer Portal. Sign up via My Health Account Workforce Login [here](#) and increase your identification to Level 2.

[About My Health Account Workforce](#)

[Identity Documents required for My Health Account Workforce Sign up](#)

## Developer Portal Access

[Log into Developer Portal via My Health Account Workforce](#)

One-time submission: these forms only need to be completed once per organisation and product:  
1. Organisation Risk  
2. Product Registration  
3. Product Risk

## Request Access to Mock+ or UAT

Submit your request to access Mock+ or UAT credentials for the digital asset you intend to integrate with

[Request access to a Digital Asset](#)

## Review and Share Credentials

The Digital Services Hub and internal teams will review your organisation, product risk, and access request. If everything is in order, UAT credentials for the requested API will be issued.

## Compliance Test Ready

Subscriber informs DSH via Request Access Comments that they are Ready for Compliance Test.

It's essential that the subscriber has completed all prerequisite documentation and internal validations before signaling readiness.

## Compliance Testing

DSH initiates the compliance validation process.

This includes technical checks on use cases specified, policy alignment, and any required sandbox testing.

Timely responses from the subscriber during this phase can significantly reduce turnaround time.

## Product Certified

Once compliance is passed and agreements are in place, the subscriber's products are officially certified. This milestone unlocks the ability to proceed to release planning.

## Pending Agreements

Legal and commercial agreements are now in motion. This step often runs in parallel with compliance testing and may involve negotiation or clarification of terms.

## Ready for End user Onboarding

All systems are go.

The subscriber has completed all technical, legal, and operational requirements.

Internal teams begin preparing for deployment, including final validation and scheduling.
