

## THE VISION

### Reaching more participants in their own communities through:

Empowering participants with greater consumer choice about what and how they can participate.

Driving equitable outcomes for Māori and Pacific people.

Greater, more diverse workforce – including greater integration of Kaiawhina into pathways.

Bringing together the services around the community and consumer.

### BRINGING DOWN THE BARRIERS TO SCREENING FOR ALL PARTICIPANTS AND WHĀNAU

### EQUITY PRIORITIES

- New pathways that empower participants with choice; aim to increase participation in Māori and Pacific people through proactive communication and support
- Enhanced health equity for wāhine Māori and Pacific peoples through less invasive clinical pathways that meet cultural and access needs combined with targeted outreach to under-screened and never-screened populations.
- Expanding the workforce with more Māori and Pacific clinical and non-clinical staff utilised at all levels of the screening process.

# HPV Primary Screening

*The HPV primary screening project will support new clinical pathways that will provide greater choice to participants to lift uptake, increase screening in priority groups and reduce mortality rates in our communities.*

### What we will achieve:

- HPV as primary screening test** – HPV testing will find more pre-cancers and prevent more cases of cervical cancer, supported by the speculum and colposcopy tests within the pathways.
- New NCSP-Register** – A single source of truth for screening records and individual schedules.
- New Pathways** – Embedding more choice and flexibility into screening including self-test, removing barriers to entry and better supporting and increasing equitable outcomes for Māori and Pacific people.
- Additional Workforce and Training** – Accredited screen-takers/GPs/midwives to do HPV testing as well as LBC test, other Registered Nurses can complete HPV test with training.

## FOUNDATIONAL STEP

*Participants able to choose self- or clinician-supervised HPV primary screening test, or a speculum test*

New clinical pathways and NCSP-Register rolled out. While all participants will be able to choose self-or-clinician-supervised HPV screening test, the focus will be on Māori and Pacific participants and increasing screening in the under- or un-screened populations.

## PHASE 2: EXPANDING REACH

*Focus on increasing uptake through notifications*

Increasing reach through notifications, including under- and un-screened populations not enrolled in primary care. Primary Care now have the ability to easily access screening history.

## PHASE 3: FULL BENEFIT

*Achieving the future vision*

More participants are encouraged into screening, increasing our screening coverage, experience and satisfaction. Participants can choose to self-test at home or in a wide variety of settings that work for them. Our workforce feels empowered through training and accreditation to advise and support participants through the new pathways. The new NCSP-Register is embedded into our ways of working.

### Implementation Progression

INITIAL ROLLOUT 26<sup>TH</sup> JULY

AUG - DEC

JAN - MAR '24
