## Introduction & Background

As part of ethical and best practice, Allied Health, Scientific and Technical (AHS&T) Professionals are accountable for demonstrating ongoing professional growth and competence of themselves and their respective service, commensurate with their level of experience. Guidelines for Expectations of Professional Practice, (GEPP), supports individuals' growth and development, as they advance their careers by building on transferable competency-based knowledge and skills that meet patient and service need. GEPP recognises that AHS&T professionals demonstrate clinical leadership and clinical expertise in their area of practice for improved patient care across the continuum.

Professional growth and ongoing competence is recognised through engagement in upwardly spiralling developmental activities within identified clinical and professional practice domains, resulting in demonstration of mastery, expertise, excellence, and leadership over time. Examples of activities may include:

- Undertaking lifelong learning to add to knowledge
- Continually developing clinical/technical skills
- Growing the breadth and depth of individual knowledge and skills of self and others
- Increasing knowledge through the application of critical thinking, analysis evaluation and research
- Commitment to quality and safety improvement
- Extending clinical practice to work at the top of one's scope
- Contributing to and influencing the wider system
- Undertaking additional or advanced qualifications

The original Guidelines for Expectations of Professional Practice, (GEPP), have been in existence within district health boards for a number of years. With the shift to a single employer Te Whatu Ora | Health New Zealand there is a need to have a consistent and transparent approach across the motu.

## What is the GEPP?

The GEPP is a tool used to provide guidance on the expectations of practice for allied health, scientific & technical professionals at various stages of development or levels of experience. It describes the broad range of knowledge, skills, competencies and practice standards and responsibilities expected of an AHS&T professional.

GEPP is a guideline and was developed:

- a) Provide a shared understanding and common foundation for performance conversations

- b) As a management tool to support clear, consistent and transparent minimum expectations of AHS&T professionals, that broadly aligns to stages of development and/or years of experience.

These competencies, skills and practice expectations are grouped into the following two domains: core functional and professional practice competencies.

Core Functional Competencies	Professional Practice Competencies
Communication Personal and People Health, Safety and Security/Risk Management Te Tiriti O Waitangi, Bicultural Safety and Equity Inclusiveness, Diversity & Cultural Safety	Professional Practice and Clinical Teaching and Learning Evaluation and Research Leadership and Management Quality and Service Improvement

It is important to note that the expectations of clinical and professional practice as laid out in this document are developed to guide expectations for all parties.

### Purpose

This document is to be used when setting objective and development plans and in conjunction with performance conversations. The tables outline key exemplars/descriptors of the types of expected professional practice behaviours and activities on a developmental continuum. Indicative stages of development have been used in the tables as this document covers professional groups on various collective employment agreements. GEPP is a practical management tool that identifies expectations AHS&T professionals at various stages of development and is not related to any union or employment agreement.

The GEPP table (Page 10-32) outlines exemplars/descriptors of the types of practice behaviours, expectation of professional practice and developmental activities that AHS&T professionals are encouraged to engage in and maintain. The GEPP will be used by AHS&T professionals and managers to:

- to provide a consistent and transparent set of expectations
- identify learning needs
- guide continuing professional development and ongoing competence
- assist with setting objectives and development plans within the performance development
- communicate role expectations to AHS&T professionals and organisational stakeholders

Whilst most of the activities will be relevant across Te Whatu Ora | Health New Zealand, some activities will only be relevant to certain practice contexts. In addition, it is acknowledged not all settings/services will afford all of the opportunities provided as examples, nor require all of the activities to be undertaken. These expectations must be contextualised within the scope of the individual's role expectations (based on their Position Description), the performance requirements of the role, the work setting, and the parameters of the service in which they work.

## How to use the GEPP

The shaded area on the table indicates the beginning level for expectations of professional practice for ASH&T professionals in each practice domain. It is important to note that some individuals will engage in some activities sooner, others may need to engage in some activities at a later date in areas where such opportunities are clearly not available and/or not required within the scope of the role or service requirements. A flexible approach should be adopted to take account for these variations. In addition, opportunities and activities will be subject to contextual factors including but not limited to factors such as skill mix, discipline needs, team and service needs.

All staff are expected to maintain clinical and professional practice at the level of practice commensurate with the salary step of their respective employment agreement, and a range of other similar level activities may be used to evidence this.

**Please note that the GEPP Practice Domain tables provide a *guide*.**

## Principles

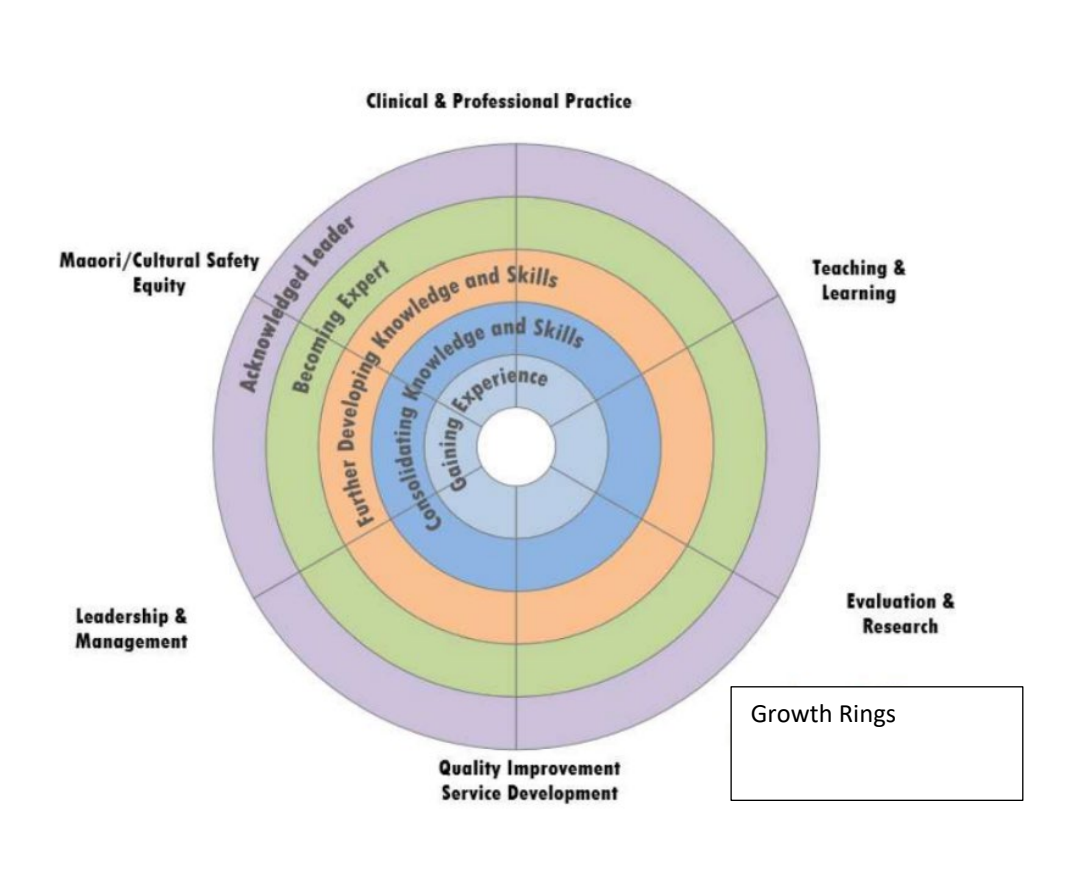

At all times all parties will operate with fairness, transparency, and consistency in the application of these guidelines. Managers and their staff will ensure open and honest discussions when setting performance and salary progression objectives; these will be commensurate with the individual's level of experience, as well as service requirements.

All parties will:

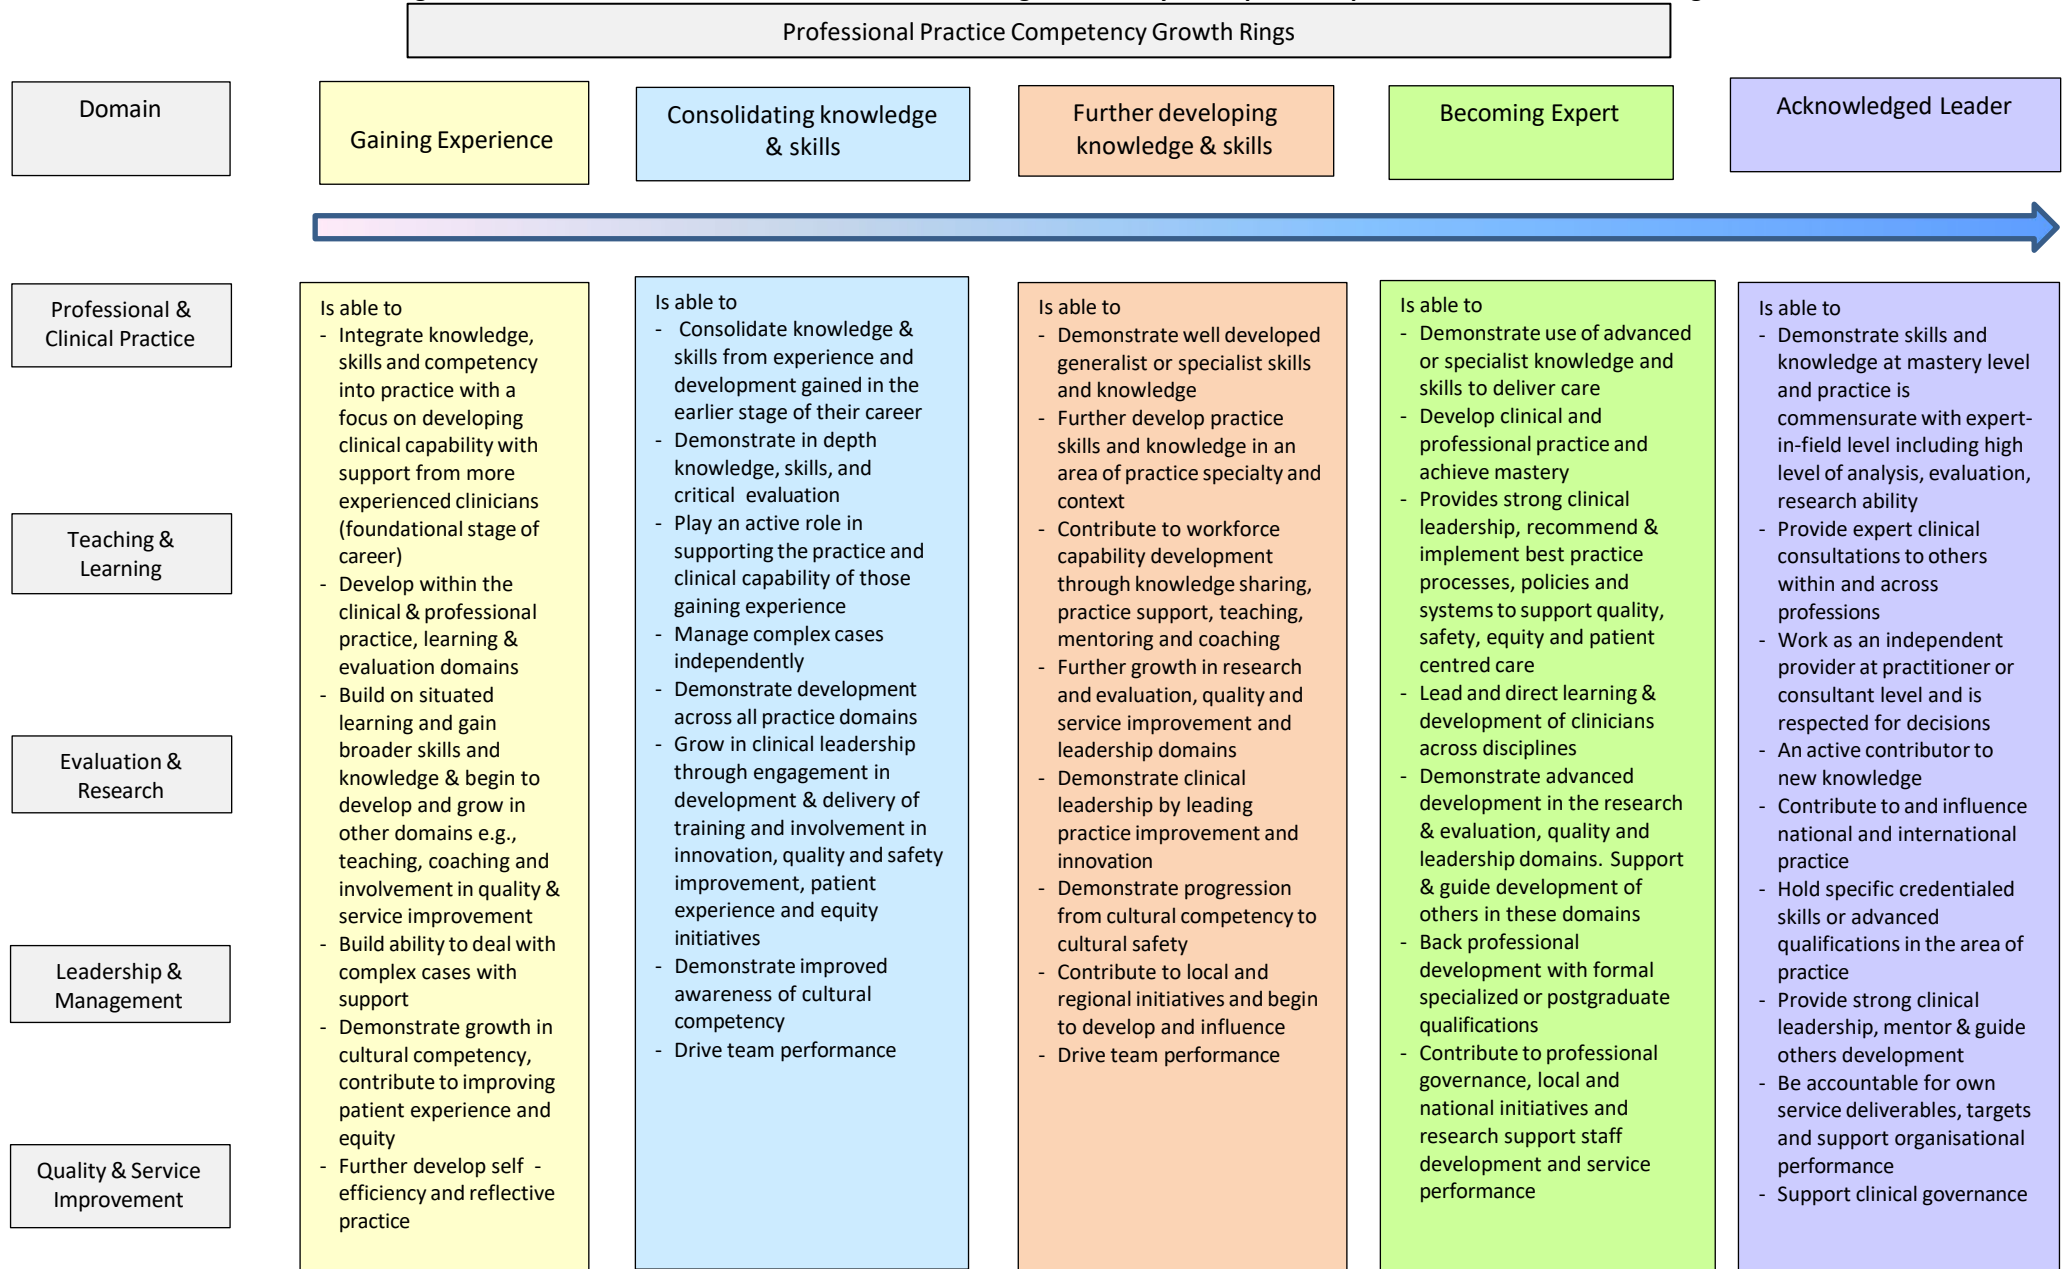

- Fulfil Te Whatu Ora | Health New Zealand Position Description requirements, including alignment with regulatory and professional standards as appropriate
- Ensure timely, open, and honest communication
- Demonstrate commitment to Te Tiriti O Waitangi principles to reduce inequalities as much as possible, improve services and health outcomes for Māori
- Understand organisational and professional responsibilities and accountabilities, including modelling organisational values
- Engage in periodic reviews of objectives in line with the Te Whatu Ora | Health New Zealand performance conversations process
- Demonstrate commitment to the growth and disciplined application of evidence-based practice principles to guide and inform the workforce to effectively carry out roles and functions
- Work to the Te Whatu Ora | Health New Zealand Clinical Quality & Professional Governance Model

The GEPP tables (page 10-32) link the competencies and practice expectations across the nine professional practice domains to the expectations of clinical roles. For each Professional Practice domain, the level of practice is represented broadly by five “growth rings” (Diagram 1). High level summary descriptions of professional practice expectations, skills, knowledge, and competencies for each “growth ring” are provided in Diagram 2. Expectations for domains within the Core Functional Competencies (Diagram 3) are expected to be achieved within the earlier part of the career path.

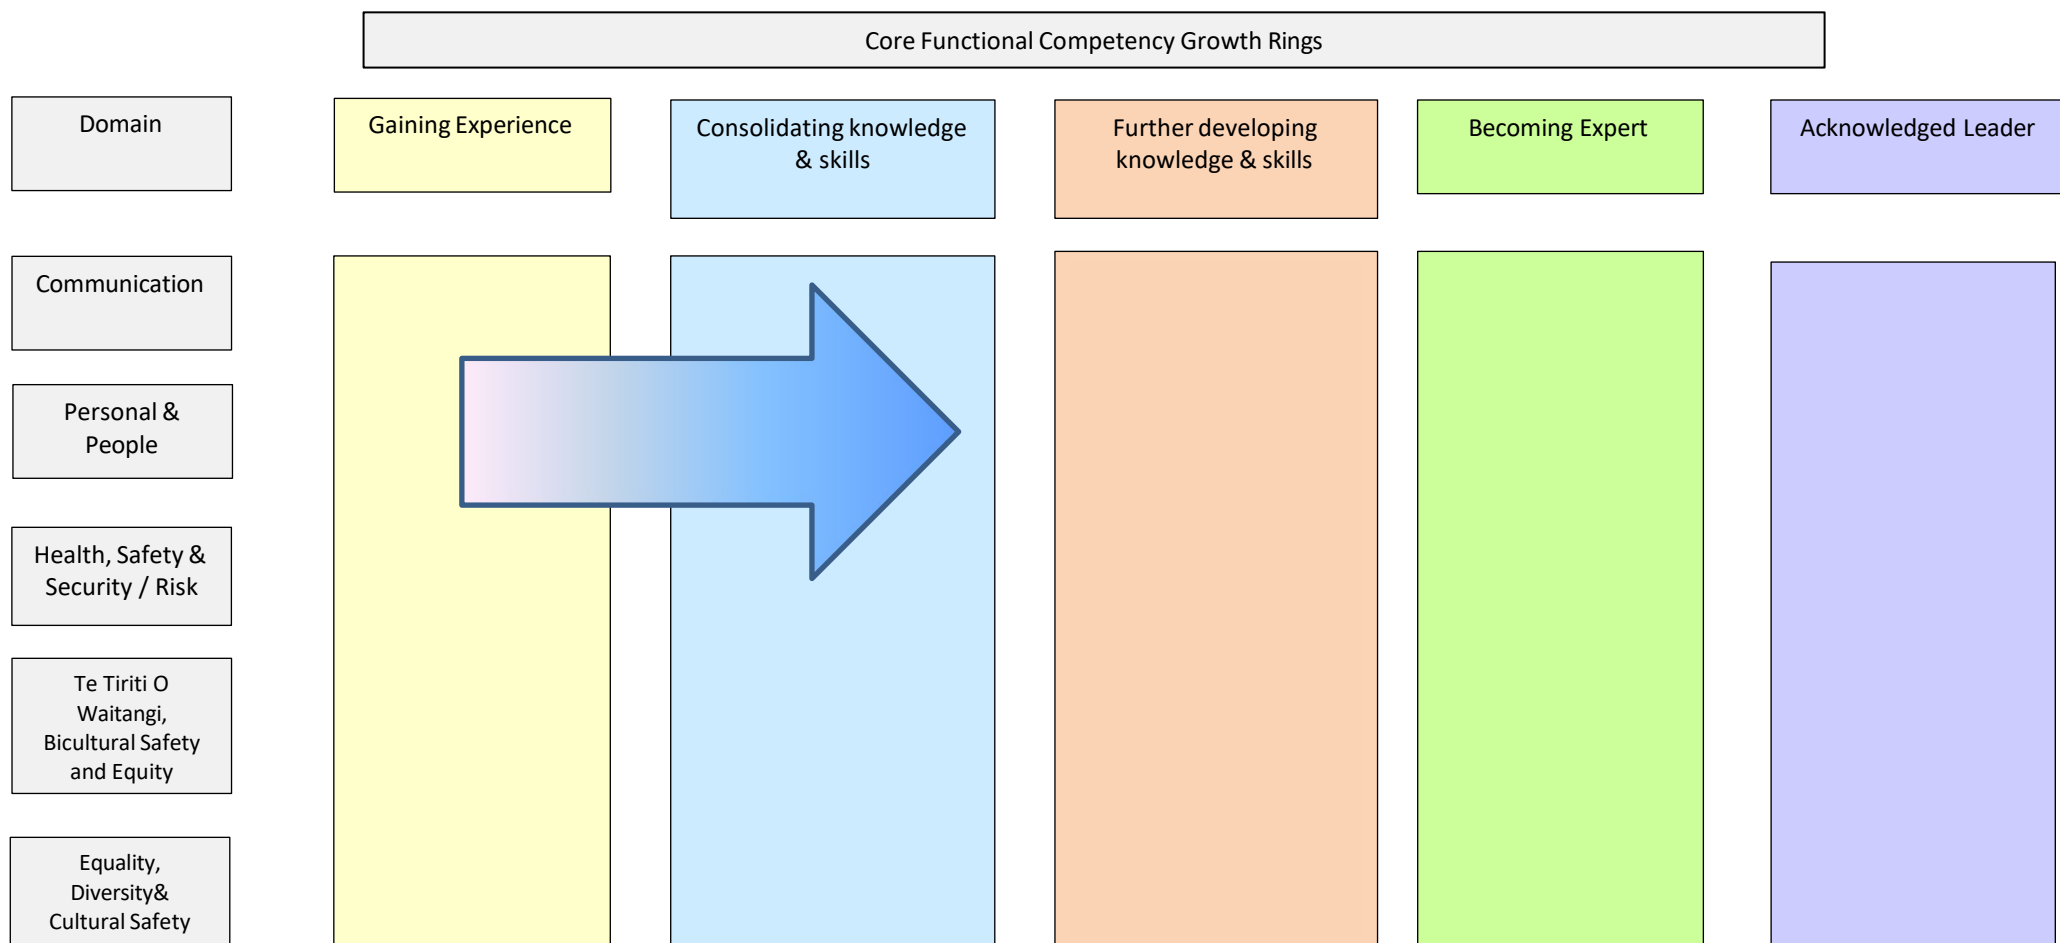

Diagram 1 Growth Rings

**Diagram 2 - Professional Practice Domains and Growth Rings – Summary Descriptor of Expectations for each Growth Ring**

**Diagram 3 Expectations for domains within the Core Functional Competencies**

Note the domains within the Core Functional competencies are expected to be achieved in the earlier part of the career.

It is important to acknowledge that while the growth rings are shown in distinct boxes, in practice, growth in domains is likely to occur more as a continuum and in some situations, for some of the domains, clinicians may possess skills reflective of a higher growth ring within a domain than expected for the role they are employed in.

### **GEPP Process**

The shaded areas on the tables that follow indicate the minimum level for expectations of professional practice for each domain. This level of practice will need to be maintained going forwards. The minimum levels are a rough guide only – some staff may develop skills sooner (or occasionally later) depending on experiences and opportunities. For all domains, there should be scope to recognise local/service/team requirements and the range and scope of available teaching and learning opportunities.

Core Functional Competencies	Stages of Development				
Expectations of Core Functional Competencies	Gaining Experience	Consolidating knowledge & skills	Further Developing Knowledge & Skills	Becoming Expert	Acknowledged Leader
<b>Communication</b>					
Communicate with a limited range of people on day-to-day matters					
Actively listens and asks questions to understand needs					
Checks information for accuracy
